
|T(x,a)| per scale, q = 1, chirp h = 0.6, β = 0.5
scale a
x
modulus ridge
law $x_a = (\beta a/k_q)^{1/(1+\beta)}$

the modulus reads h; the parts oscillate
ridge amplitude
scale a
|T| at the ridge, q = 1
|T| at the ridge, q = 1.5
|T| at the ridge, q = 0.7
|Re T| at the ridge, q = 1
|Im T| at the ridge, q = 1
law $a^{(h-\beta/2)/(1+\beta)} = a^{0.233}$

$x_a \propto a^{1/(1+\beta)}$: slope 0.667 gives β (dashed: the law)
ridge position x_a
scale a
ridge, q = 1 (slope 0.659)
ridge, q = 1.5 (slope 0.681)
ridge, q = 0.7 (slope 0.735)

the q-Morlet: Re ψ and envelope (Borges eqs. 23, 29)
u
Re ψ, q = 0.7, k_q = 5.62
Re ψ, q = 1, k_q = 5.34
Re ψ, q = 1.5, k_q = 4.88
